

# Basic Detail Report

---

**A scientist experimenting with molten glass**

## **at the National Laboratories of Frascati, near Rome**

### **Date**

1969-1979

### **Medium**

gelatin silver print

### **Description**

The National Laboratories of Frascati (LNF) is the oldest research facility for the Italian and nuclear physics with accelerators and the largest laboratory of the National Institute of Nuclear Physics (INFN), the organization that promotes, coordinates and finances Research in the field of nuclear and subnuclear physics. The Frascati Research Centre of ENEA is one of the major research centres – at the national and international levels – where R&D activities are focused on nuclear fusion, laser technologies and particle accelerators. The Centre's activities also include characterisation and protection of the environment.

### **Dimensions**

Overall: 21.1 x 30.2 cm (8 2/8 x 11 7/8 in.)
